1. Winter School at UACEG

- **Period:** 29th of November – 10th of December 2021
- **Venue:** Online via Microsoft Teams
- **Participants:**
 - Planned number: 5 students
 - ✓ 1 from University of Nis
 - ✓ 1 from University of Montenegro
 - ✓ 1 from University in Mostar
 - ✓ 1 from University of Podgorica in Kosovska Mitrovica
 - ✓ 1 from Academy of Applied Studies of Kosovo and Metohija
 - Actual number: 3-4 students
 - ✓ One student reported ejecting problems with MS Teams
- **Schedule:** from 9:30 to 15:30 EET - each working day

1. Winter School at UACEG

First week: 29. November – 3. December

Day	Monday 29. November	Tuesday 30. November	Wednesday 1. December	Thursday 2. December	Friday 3. December
Topic	Irrigation Systems and Drought Management	Investments in Irrigation Infrastructure	Hydrological and Hydraulic modelling	Water Management Optimization Problems	Water Management Examples - VR Rver Case Study
Lecturer	Assoc. Prof. P. Filkov	Assoc. Prof. P. Filkov	Assist. Prof. V. Kukurin	Assoc. Prof. P. Filkov	Assist. Prof. E. Tsanov
9:30 – 12:00 (EET)	Lectures <ul style="list-style-type: none"> Introduction Irrigation Systems in Bulgaria Irrigation Systems – elements. Crop Response to Water. Yield-Water relationship 	Lectures <ul style="list-style-type: none"> Introduction Water Losses and Efficiency of Irrigation Systems Investments in Irrigation Infrastructure and Water Saving Requirements Determining Potential Water Savings due to investments 	Lectures <ul style="list-style-type: none"> Introduction Types of models Rainfall – runoff models Hydraulic models 1D, 2D and 3D models 	Lectures <ul style="list-style-type: none"> Introduction Linear Programming Resource Allocation Problem Transportation Problem Multicriteria analysis – an Example for Prioritization of Investments in Irrigation Infrastructure 	Lectures <ul style="list-style-type: none"> Introduction Vit Watershed WEAP modelling Optimization
Lunch	Lectures <ul style="list-style-type: none"> Operation and Management of Irrigation Systems. Water Metering in Irrigation Systems 	Assignment of Task # 1 – Estimation of Water Losses and Efficiency of an Irrigation System and Determination of Potential Water Saving due to Investments in Irrigation Infrastructure	Lectures <ul style="list-style-type: none"> Model applications Floodplain modelling Flood early warning systems Practical work in class with 1D or 2D models	Assignment of Task # 2 – Solving a simple Optimization Task related to Water Resources Management Students work in class (supervised by teacher)	Lectures <ul style="list-style-type: none"> Scenarios and scenarios optimization Water account tables
After 15:30		Students work (individually)	Students work (individually)	Students work (individually)	Consultation Time Assoc. Prof. P. Filkov

1. Winter School at UACEG

Second week: 6. December – 10. December

Day	Monday 6. December	Tuesday 7. December	Wednesday 8. December	Thursday 9. December	Friday 10. December
Topic	Hydraulic structures. Dams and reservoirs-1	Hydraulic structures. Dams and reservoirs-2	Hydraulic structures. Dams and reservoirs-3	Hydraulic structures. Dams and reservoirs-4	Discussion and Presentation
Lecturer	Assoc. Prof. M. Mavrova	Assoc. Prof. M. Mavrova	Assoc. Prof. M. Mavrova	Assoc. Prof. M. Mavrova	Assoc. Prof. P. Filkov Assoc. Prof. M. Mavrova
9:30 – 13:00 (EET)	Lectures <ul style="list-style-type: none"> Elements of dam engineering Planning of water resource projects Embankment dam types; Concrete dam types Spillways, outlets and ancillary works Loads on dams 	Lectures <ul style="list-style-type: none"> Embankment dam engineering Classification and engineering characteristics of soils Principles of embankment dam design Seepage, stability, and stress analysis 	Lectures <ul style="list-style-type: none"> Concrete dam engineering Principles of concrete dam design Gravity dam analysis Concrete for dams; The roller-compacted concrete gravity dam design Design features and construction 	Lectures <ul style="list-style-type: none"> Dam outlet works and Energy dissipation Introduction Design flood Freeboard Cavitation Spillways 	<ul style="list-style-type: none"> Students present their work on themes assigned in lectures in previous days of the course Students present the results of Tasks # 1 and # 2. Discussion
Lunch	Lectures <ul style="list-style-type: none"> Presentation of interesting examples of dams and reservoirs Assignment of theme for presentation Students work (in groups)	Lectures <ul style="list-style-type: none"> Embankment dam engineering Settlement and deformation Rockfill embankments Examples Students work (in groups)	Lectures <ul style="list-style-type: none"> Concrete dam engineering Dam Monitoring and Operation Examples Students work (in groups)	Lectures <ul style="list-style-type: none"> Dam outlet works and Energy dissipation Bottom outlets Energy dissipation Examples Students work (in groups)	<div style="border: 2px solid red; padding: 5px; color: red; font-weight: bold;"> Reduced schedule due to smaller number of presenters than initially planned </div>
After 15:30	Students work (individually)	Students work (individually)	Students work (individually)	Students work (individually)

1. Winter School at UACEG

• Tasks

TASK # 1

ESTIMATION OF WATER LOSSES AND EFFICIENCY OF AN IRRIGATION SYSTEM.
DETERMINING OF THE POTENTIAL WATER SAVINGS DUE TO INVESTMENTS IN IRRIGATION INFRASTRUCTURE

1. Initial data

A simplified scheme of the investigated Irrigation System (IS) is presented on Fig. 1. The IS consists of 7 Irrigation Fields (IFs). The delivery network of IS has a Main Canal with two sections and two Distributary Canals. The volumes of water measured at specific locations at Main and Secondary Canal, as well as at turnouts to Irrigation Fields (IFs) are given in *Terms of Reference (TOR)*. The measured volumes of water are also shown on Fig. 1.

Fig. 1. Schematic View of the Delivery Network of the IS and Measured Volumes of Water at Specific Locations

TASK # 2

OPTIMIZATION PROBLEMS.
TRANSPORTATION PROBLEM – APPLICATION IN WATER RESOURCES MANAGEMENT

1. Initial data

A simplified scheme of the water management system (WMS) is presented on Fig. 1. According to initial data provided in *Terms of Reference (TOR)* the WMS consists of 3 water sources – a pumping station (PS 1) abstracting water from a reservoir, a pumping station (PS 2) abstracting surface water and a pumping station (PS 3) abstracting groundwater. These water sources are named A_1, A_2, A_3 . The water sources have supply capacities of the following volumes of water per day (in thousands m^3): $W_1^s = 40, W_2^s = 40 \text{ и } W_3^s = 20$.

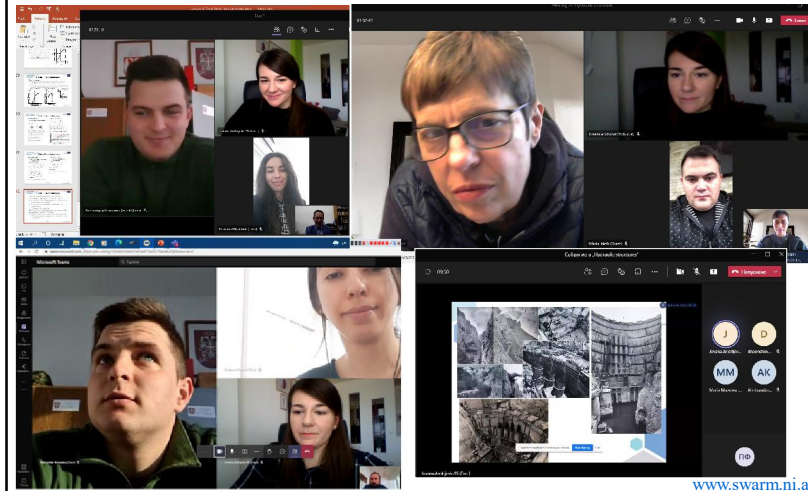

Fig. 1. Schematic View of the Water Sources, Delivery Networks and Water Users

- Certificates**

CERTIFICATE OF ATTENDANCE

This certificate is issued to confirm that

Drazana Miranovic

from

University of Montenegro

attended the winter school at the

University of Architecture, Civil Engineering and Geodesy – Sofia, Bulgaria

from 29 November 2021 to 10 December 2021,

within the framework of ERASMUS+ CBHE KA2 SWARM project

(Grant no. 597888-EPP-1-2018-1-RS-EPPKA2-CBHE-IP)

Sofia,
10.12.2021

Assoc. Prof. Petar Filkov, PhD, M.Eng.
Dean of the Faculty of Hydraulic Engineering

CERTIFICATE OF ATTENDANCE

This certificate is issued to confirm that

Jovana Andrijevic

from

University of Wis

attended and successfully finished the winter school at the

University of Architecture, Civil Engineering and Geodesy – Sofia, Bulgaria

from 29 November 2021 to 10 December 2021,

within the framework of ERASMUS+ CBHE KA2 SWARM project

(Grant no. 597888-EPP-1-2018-1-RS-EPPKA2-CBHE-IP)

Sofia,
10.12.2021

Comment

2 responses

It was a really pleasant and inspiring experience.
The knowledge and lectures will be very useful in my later practice as an civil engineer.

I am very pleased with the school.

...

Thank you for your attention!
